## **Introduction and Interests of the Copyright Alliance**

The Copyright Alliance<sup>1</sup> submits this *amicus* brief, in accordance with the Court’s April 1, 2025 Order, because our members have a strong interest in courts properly applying the Copyright Act, including in the context of generative artificial intelligence (AI).

One of the most important provisions of copyright law is the fair use doctrine, which, the Supreme Court has emphasized, is dependent on the specific facts of a case and so must be applied on a case-by-case basis. When a court considers a fair use defense, past fair use decisions may be instructive, but they do not dictate case outcomes, even when they involve similar facts, uses, and/or technologies. Yet Meta and its amici supporters seek to convince the Court otherwise and extract categorical holdings where there are none. They argue that a number of past fair use cases clearly support their position that Meta’s copying<sup>2</sup> of copyright-protected material to “train” its generative AI model qualifies as fair use “as a matter of law.” Dkt. 501 at 1. In doing so, they misapply the fair use doctrine, relying on fair use cases that are no longer controlling and that involved facts, uses and technologies bearing little resemblance to Meta’s. As other courts considering similar arguments in pending generative AI infringement litigation have found, the cases upon which Meta and its *amici* rely are distinguishable in myriad ways from Meta’s unauthorized use of massive amounts of copyrighted works to develop a commercial product for commercial purposes, and thus

---

<sup>1</sup> The Copyright Alliance is a nonprofit, nonpartisan 501(c)(4) public interest and educational organization dedicated to advocating policies that promote and preserve the value of copyright and protecting the rights of creators. It represents the copyright interests of over 2 million individual creators and over 15,000 organizations across all creative industries, including graphic and visual artists, photographers, writers, musical composers and recording artists, journalists, documentarians and filmmakers, software developers, and the businesses that support them. Importantly, Copyright Alliance members include companies that have developed their own AI tools, companies that have been using AI in some form for many years, and companies that have just begun exploring how to use generative AI.

<sup>2</sup> Meta and its *amici* frequently characterize Meta’s activities as “scraping,” “ingesting,” “learning,” “training,” etc. By using and popularizing such terms, Meta and others with a similar interest in appropriating copyrighted content for their own commercial purposes seek to anthropomorphize their software tools and direct attention away from their own misconduct. These terms are mere euphemism, intended to obscure what Meta is actually doing: copying. Such activity violates the Copyright Act, absent the authorization of the copyright owner or a valid defense. *See* 17 U.S.C. § 106(1) (granting the copyright owner the exclusive right “to reproduce the copyrighted work in copies”).

1 they should be afforded very limited weight.

2 Moreover, in arguing that the allegedly transformative nature of its Llama model should tip  
3 the scales in favor of fair use, Meta improperly asks the Court to disregard the Supreme Court  
4 decision in *Andy Warhol Foundation for the Visual Arts, Inc. v. Goldsmith*, which clarified that  
5 even when a court finds a use to be transformative, that finding should have a limited effect on the  
6 ultimate fair use determination. For these reasons, the Copyright Alliance respectfully submits that  
7 the Court should deny Meta’s motion for summary judgment.

### 8 Argument

#### 9 **A. Meta’s Use is Not for a Transformative Purpose, But Even if it Were, 10 a Finding of Transformativeness Does Not Control the Fair Use Analysis**

11 Central to the Supreme Court’s decision in *Andy Warhol Foundation v. Goldsmith*  
12 (“Warhol”) was its confirmation that the defendant’s purported “justification” for the use must be  
13 considered as part of the first-factor analysis. This standard, which was first explained by the  
14 Supreme Court’s discussion of parodic uses in *Campbell v. Acuff-Rose*, was unmistakably  
15 reaffirmed in *Warhol*, which confirmed that when an original work and secondary use share the  
16 same or highly similar purposes, and the secondary use is commercial, “a particularly compelling  
17 justification is needed.” *Andy Warhol Found. for the Visual Arts, Inc. v. Goldsmith*, 598 U.S. 508,  
18 547 (2023). Applying this standard to the facts of this case, there is insufficient justification to  
19 support Meta’s claims that it needs to copy the entire internet (including pirate websites) or ignore  
20 existing licenses offered by copyright owners in order to train its generative AI models.

21 To determine whether a use qualifies as fair use, one must consider the ultimate purpose of  
22 the use and whether there is a justification for the use. For example, in *Warhol*, the use was not  
23 simply “commercial licensing” but rather licensing *for a story about Prince* (the celebrity in the  
24 image), which was the same use that the copyright owner, Goldsmith, made of her images. *Id.* at  
25 536 n.11 (“The Court does not define the purpose as simply ‘commercial’ or ‘commercial  
26 licensing.’”); *id.* at 539 n.15 (“Both Goldsmith and AWF sold images of Prince (AWF’s copying  
27 Goldsmith’s) to magazines to illustrate stories about the celebrity, which is the typical use made of  
28 Goldsmith’s photographs.”).

Meta seeks to isolate the “training” process and ignore the output of generative AI when describing the purpose of generative AI. *E.g.*, Dkt. 501 at 14 (“Meta’s copying of books to train Llama furthers the purposes of copyright by enabling the creation of a transformative new technology . . . .”). In describing its purpose as “training,” Meta claims its copying “serves a manifestly different purpose from Plaintiffs’ books.” *Id.* But Meta’s motion ignores what comes after the initial “training”—most notably the generation of output that *serves the same purpose* of the ingested works. The *Warhol* decision and many other pre-*Warhol* cases are careful to *consider the ultimate purpose of a use* and not simply end their analysis at an intermediate step—whether that be reverse engineering, shrinking a work into a thumbnail image, archiving a work for use in a plagiarism detection service or a searchable digital repository for those with print disabilities, sampling, or training.

For example, when the court analyzed the fair use defenses in *Kelly v. Arriba Soft Corp.* (“*Arriba*”) and *A.V. ex rel. Vanderhye v. iParadigms, LLC* (“*iParadigms*”), both of which Meta relies on, the court did not simply analyze the immediate purpose of the intermediate copying standing alone. Rather, it considered the ultimate purpose of the use and what effect it might have on the need for the original, and on creativity in general. In *Arriba*, Arriba Soft copied an image, shrank the image into the size of a thumbnail, and displayed the thumbnail image as part of an image search engine. The court considered the ultimate purpose of displaying the thumbnail images on the search page, not the purpose of the shrinking process itself. 336 F.3d 811, 818 (9th Cir 2003). Similarly, in *iParadigms*, the court considered the ultimate purpose of detecting plagiarism, not only the archiving students’ papers in isolation. 562 F.3d 630, 639-641 (4th Cir. 2009).

Further demonstrating courts’ considerations of the ultimate or actual purpose of a use, the Second Circuit in *American Geophysical Union v. Texaco, Inc.* rejected over-generalized fair use justifications for widespread infringement:

The purposes illustrated by the categories listed in section 107 refer primarily to the work of authorship alleged to be a fair use, not to the activity in which the alleged infringer is engaged. Texaco cannot gain fair use insulation for [its employee]’s archival photocopying of articles (or books) simply because such

1 copying is done by a company doing research. It would be equally extravagant for  
 2 a newspaper to contend that because its business is “news reporting” it may line  
 3 the shelves of its reporters with photocopies of books on journalism or that schools  
 4 engaged in “teaching” may supply its faculty members with personal photocopies  
 5 of books on educational techniques or substantive fields. Whatever benefit copying  
 6 and reading such books might contribute to the process of “teaching” would not  
 7 for that reason satisfy the test of a “teaching” purpose.

8 60 F.3d 913, 924 (2d Cir. 1994) (“Texaco”). These cases and many of the cases discussed below  
 9 make clear that, when considering the purpose of the use in a factor-one fair use analysis, the  
 10 analysis must not merely consider the intermediate step but rather must take into account the  
 11 ultimate purpose of the use. Thus, the purpose of Meta’s Llama cannot be considered in a vacuum  
 12 of “training.” “Training,” standing alone, is unlikely to constitute a sufficiently transformative use  
 13 or purpose any more than “licensing” in *Warhol*, “sampling” in *Campbell*, “shrinking” in *Arriba*,  
 14 “archiving” in *iParadigms*, or “teaching” in *Texaco*. Meta’s wholesale copying of Plaintiffs’  
 15 copyright-protected literary works for “training” must be considered alongside its ultimate  
 16 purpose—to generate output that serves the same purpose and compete with the ingested works.

17 Furthermore, even if the use is found to be for a transformative purpose, the Supreme Court  
 18 made clear in *Warhol* that whether a use is transformative is not dispositive of the question of fair  
 19 use; rather, it is merely one subfactor within the first statutory fair use factor. Under *Warhol*, it is  
 20 thus inappropriate for courts to attribute dispositive weight to what is simply one aspect of the first-  
 21 factor analysis. Any factor-one analysis must involve a weighing of other considerations, such as  
 22 the commercial nature of and justification for the use, both of which will factor prominently here.  
 23 *See* 598 U.S. at 537. Llama is clearly part of a commercial venture, designed to attract as many  
 24 users as possible and bolster Meta’s position in the market. This commercial purpose should weigh  
 25 against fair use under the first factor and offset in whole or in part any finding of transformative  
 26 purpose. Therefore, even if the use of copyrighted works for ingestion by Meta were found to be a  
 27 transformative use in this case (though it is not), that would not necessarily mean factor one favors  
 28 fair use, and it most certainly would not control the fair use analysis.

**B. The Fair Use Decisions Cited by Meta are Significantly Undermined by the Supreme Court’s decision in *Warhol***

Many of the cases on which Meta relies for its argument that its copying of Plaintiffs’ works is transformative were decided after *Campbell* (1994), but before *Warhol* (2023). During that three-decade period, courts took a very broad view of transformativeness, and in fact, a finding of transformativeness was very often dispositive of the ultimate fair use question.<sup>3</sup>

*Warhol* dramatically changed the landscape of fair use jurisprudence, both by narrowing what “transformative” means and clarifying that a finding of transformativeness does not lead ineluctably to a conclusion that the use was fair. As a result, it is now inherently suspect that a pre-*Warhol* fair use case in which the determination turned on a finding of transformativeness is still good law.<sup>4</sup> Thus, many of the fair use cases on which Meta relies, including *Authors Guild v. Google, Inc.*, *Authors Guild v. HathiTrust*, *iParadigms*, *Arriba*, *Perfect 10 v. Amazon*, and *Sony Computer Entertainment, Inc. v. Connectix Corp.*, all of which were decided between *Campbell* and *Warhol*, and all of which relied heavily on a transformative use finding for their ultimate holding of fair use, simply do not reflect the current, post-*Warhol*, state of the law.

**C. The Non-AI Cases Meta Relies Upon are Distinguishable**

Claiming that its use of Plaintiffs’ copyrighted works is “radically transformative,” Meta then argues that “[t]ime and again, courts have held uses far less transformative than Meta’s to be

---

<sup>3</sup> Indeed, between 1994 and 2023, a determination that a use was transformative almost always meant that a court concluded it was fair use. A 2011 study found that of all the fair use cases decided in 2006 through 2010, the defendant won 100% of the time when the court found the subject use to be transformative. Neil Weinstock Netanel, *Making Sense of Fair Use*, 15 Lewis & Clark L. Rev. 715, 754–55 (2011). Between 2010 and 2023, the Copyright Alliance is aware of only one circuit court decision holding that a use was transformative but not fair use. See *Fox News Network, LLC v. TVEyes, Inc.*, 883 F.3d 169, 180–81 (2d Cir. 2018); see also Jiarui Liu, *An Empirical Study of Transformative Use in Copyright Law*, 22 Stan. Tech. L. Rev. 163, 185–86 (2019), available at SSRN: <https://ssrn.com/abstract=3330236> (finding that transformative use was the only statistically significant subfactor driving the first factor determination).

<sup>4</sup> Shyamkrishna Balganesh, Jane C. Ginsburg & Peter S. Menell, *Comments on Preliminary Draft 9 of the American Law Institute’s Restatement of Copyright* (2023), available at: [https://scholarship.law.columbia.edu/faculty\\_scholarship/4159](https://scholarship.law.columbia.edu/faculty_scholarship/4159) (“The Supreme Court’s *Warhol* decision shifted fair use analysis back to the course that Congress intended. It is important to recognize many cases decided during the interim period [between *Campbell* and *Warhol*] that boil fair use analysis down to a mere transformativeness inquiry are no longer good law.”)

1 fair at summary judgment.” Dkt. 501 at 15. However, the transformative nature and purpose of the  
 2 uses in these cases are in no way analogous to the use and underlying generative AI technology in  
 3 the instant case.

4 **i. *Authors Guild v. Google, Inc.* (“*Google Books*”)**

5 While Meta claims that *Google Books* is “the most factually analogous case” to the instant  
 6 dispute, Dkt. 501 at 15, *Google Books* is clearly distinguishable because it involved a completely  
 7 different purpose for the use of the copyrighted materials—to provide information location services  
 8 to drive readers to the relevant source material. The Second Circuit agreed with the district court’s  
 9 ruling that Google’s digitization and subsequent use of the copyrighted works was fair use.  
 10 Concluding that Google’s use was transformative, the appellate court held that “Google’s making  
 11 of a digital copy to provide a search function . . . augments public knowledge by making available  
 12 information about [p]laintiffs’ books without providing the public with a substantial substitute for  
 13 matter protected by the [p]laintiffs’ copyright interests in the original works or derivatives of them.”  
 14 804 F.3d 202, 207 (2d Cir. 2015).

15 Significantly, the decision made clear that the case “tests the boundaries of fair use”—a  
 16 position that the Ninth Circuit agreed with—and may have come out differently had any one of  
 17 several factors varied. *Id.* at 206; *see also VHT, Inc. v. Zillow Grp., Inc.*, 918 F.3d 723, 743 (9th  
 18 Cir. 2019) (“We agree with the Second Circuit’s observation that the copyright dispute over the  
 19 Google Books search engine ‘tests the boundaries of fair use.’”). First, the Second Circuit explained  
 20 that the fair use analysis would have been different if the purpose of Google’s scanning of literary  
 21 works was to substitute for the original works. 804 F.3d at 222 (“Google has constructed the snippet  
 22 feature in a manner that substantially protects against its serving as an effectively competing  
 23 substitute for Plaintiffs’ books.”) *Id.* at 226 (“The program does not allow access in any substantial  
 24 way to a book’s expressive content.”). In other words, it was critical that Google used the books to  
 25 provide information *about* the works and to serve as a pointer for readers by helping readers  
 26 “identify and locate” the original works. *Id.* at 217. By contrast, Meta’s Llama cannibalizes  
 27 Plaintiffs’ copyrighted works for the purpose of allowing its users to manufacture the same type of  
 28 works and thus is much more likely to usurp the market for (and obviate any need to consume)

1 Plaintiffs' works.

2 Second, in *Google Books*, Google used the works *for the information* in the works, but in  
 3 the instant case, Meta is using both the information and the *expressive elements* of the work. What  
 4 Meta considers to be unprotectable information is actually protected copyrightable expression.<sup>5</sup>  
 5 That Meta may extract and retain data about plaintiffs' works while later discarding the works  
 6 themselves does not change the fact that they copied entire copyrighted works, including all the  
 7 expressive elements that make the works copyrightable—an act that unambiguously constitutes  
 8 prima facie copyright infringement.

9 Third, in *Google Books*, Google copied legitimate copies of books. But in the instant case,  
 10 Plaintiffs have cited evidence indicating that Meta illegally copied copyrighted works from *pirate*  
 11 websites and services.

12 Fourth, and perhaps most important, the court in *Google Books* concluded (with regard to  
 13 the fourth fair use factor) that there was no actual or potential market for the licensing of copyrighted  
 14 works to search engines. *Id.* at 226-227. This is significantly different than with generative AI,  
 15 where there is very clearly an actual market for the licensing of copyrighted works for ingestion.<sup>6</sup>

16 Any of these differences standing alone would likely be sufficient to push this case beyond  
 17 “the boundaries of fair use” set forth in *Google Books*. When taken together, there can be no doubt  
 18

---

19 <sup>5</sup> In the case of Plaintiffs' literary works, the words an author chooses to express herself, the  
 20 relationship of those words into a sentence, the relationship of that sentence to other sentences within  
 21 a paragraph, and so on, represent that author's copyrightable expression. It is that type of expression  
 22 that makes literary works protectable under copyright.

23 <sup>6</sup> There is already high demand for corpora of copyrighted works for ingestion by AI systems, and  
 24 copyright owners are offering and entering into various licensing agreements. Publishers and  
 25 copyright owners of scientific and research works such as Elsevier, JSTOR, the Copyright Clearance  
 26 Center (and many others) have either offered or entered into licensing agreements that allow for text  
 27 and data mining (TDM) or other generative AI uses. Getty Images has struck several licensing deals  
 28 with generative AI companies for use of portions of its catalog of stock images for “training.” Reddit  
 has partnered with Google on a \$60 million-per-year deal to provide content for “training” its AI  
 models, including Gemini. Multiple news organization, including NewsCorp, the Associated Press,  
 the Atlantic, and the Financial Times, have reached deals with OpenAI for use of their works to  
 “train” ChatGPT. The list goes on and on—with new licensing deals being announced almost daily.  
 See Copyright Alliance, “Generative AI Licensing Isn't Just Possible, It's Essential,” *available at*  
<https://copyrightalliance.org/generative-ai-licensing/> (citing original sources and media coverage).

1 that they do.

2 **ii. *Kelly v. Arriba Soft Corp. (“Arriba”)***

3 Meta asserts that the Ninth’s Circuit’s decision in *Arriba* is “instructive,” but it ignores the  
 4 major distinction that in *Arriba* there was no risk of supplanting the market for the original. Dkt.  
 5 501 at 16. In that case, Arriba Soft was sued for copyright infringement for copying the plaintiff’s  
 6 photographs from the internet and then displaying smaller, lower resolution “thumbnail” copies of  
 7 the photographs on the search results page of its visual search engine. The court held that Arriba  
 8 Soft’s reproduction of the plaintiff’s photos as thumbnail images qualified as fair use because the  
 9 thumbnail images served an entirely different purpose than the original images. Specifically, the  
 10 court held that the plaintiff’s photographs were artistic works that were “intended to inform and to  
 11 engage the viewer in an aesthetic experience,” in contrast to Arriba’s use, which the court found  
 12 was “unrelated to any aesthetic purpose” but instead offered a way “to help index and improve  
 13 access to images on the internet and their related web sites.” 336 F.3d 811, 818-19 (9th Cir. 2003).

14 Here, by contrast, both the purpose of Plaintiffs’ works that are ingested and the purpose of  
 15 the material generated by Llama are often the same. Because both the ingested work and AI-  
 16 generated output often serve the same purpose, that “seriously weakens” Meta’s fair use claim. *Id.*  
 17 The court ruled in favor of fair use in *Arriba* because “[t]he thumbnails do not stifle artistic  
 18 creativity because they *are not used for illustrative or artistic purposes* and therefore *do not*  
 19 *supplant the need for the originals.*” *Id.* at 820 (emphasis added). This is very different from  
 20 ingestion by Meta’s Llama model. Unlike the thumbnail images at issue in *Arriba*, when literary  
 21 material is generated by an AI model, it is certainly possible, and in many cases, likely, that such  
 22 AI-generated output would “supplant the need for the original [*i.e.*, the ingested work].” *Id.*

23 **iii. *Perfect 10, Inc. v. Amazon.com, Inc.***

24 Meta’s motion repeatedly cites to *Perfect 10 v. Amazon*, claiming that it, like the *Arriba*  
 25 case, represents a transformative fair use decision that applies to generative AI copying. Dkt. 501  
 26 at 16, 20-23. But just like the *Arriba* case, *Perfect 10* is unhelpful here because it involved copying  
 27 works in service of creating a search function that provided information about those works, rather  
 28 than supplanting the need for the original works. In *Perfect 10*, Google and Amazon were sued for,

among other things, infringing Perfect 10’s copyrighted images by displaying smaller, lower resolution “thumbnail” copies of the images on the search results page of Google’s image search. Similar to *Arriba*, the court in *Perfect 10* concluded that the use of thumbnail versions of the plaintiff’s images in the search engine qualified as fair use because, “[a]lthough an image may have been created originally to serve an entertainment, aesthetic, or informative function, a search engine transforms the image into a pointer directing a user to a source of information.” 508 F.3d 1146, 1165 (9th Cir. 2007). This statement clearly distinguishes the facts in both *Perfect 10* and *Arriba* from the instant case because the purpose of Meta’s copying is not to point a user to a source of information.

#### iv. *Google LLC v. Oracle Am., Inc.*

Meta asserts that the Supreme Court’s 2021 decision in *Google v. Oracle* is “also on point.” Dkt. 501 at 16. However, the decision in *Google v. Oracle* is expressly limited to the specific type of computer declaring code at issue in that case and cannot be applied to past or future fair use analyses outside of that specific context. *See Google LLC v. Oracle Am., Inc.*, 141 S. Ct. 1183, 1208 (2021) (the Court was clear that its decision “do[es] not overturn or modify [its] earlier cases” involving fair use). It is widely recognized that *Google v. Oracle* has a very limited application—and is simply inapplicable when the work being used is a traditional copyrighted work (*e.g.*, book, song, movie, photograph, etc.).<sup>7</sup>

---

<sup>7</sup> *See e.g.*, Brief for the United States as Amicus Curiae Supporting Defendants, *Andy Warhol Found. for the Visual Arts, Inc. v. Goldsmith*, 598 U.S. 508, 143 S. Ct. 1258 (2023) (No. 21-869), at 25 (“[Andy Warhol Foundation’s] reliance on Google is likewise misplaced. Emphasizing the difficulty of ‘apply[ing] traditional copyright concepts in th[e] technological world’ of ‘functional’ computer programs, the Google Court principally focused on the second statutory factor, emphasizing the copied code’s distance ‘from the core of copyright.’”) (citations omitted); Jonathan Bailey, *How the Warhol Ruling Could Change Fair Use*, PLAGIARISM TODAY (May 18, 2023), <https://www.plagiarismtoday.com/2023/05/18/how-the-warhol-ruling-could-change-fair-use/> (“However, given how narrow [the *Google v. Oracle* case] was, applying solely to software code, the Warhol case is the first broad SCOTUS decision on fair use in nearly 30 years.”); PROSKAUER ROSE LLP, *Supreme Court Affirms Andy Warhol’s Prince Series Not Transformative Fair Use* (June 14, 2023), <https://www.proskauer.com/blog/supreme-court-affirms-andy-warhols-prince-series-not-transformative-fair-use> (“Recently, the court in *Google v. Oracle* interpreted fair use broadly but limited its decision to the context of software codes.”); Tyler Ochoa, *U.S. Supreme Court Vindicates Photographer But Destabilizes Fair Use — Andy Warhol Foundation v. Goldsmith* (Guest Blog Post), TECHNOLOGY & MARKETING LAW BLOG (June 20, 2023),

1           Significantly, the Court was careful to distinguish computer code from highly expressive  
 2 works (like those at issue in this case) that have no functional elements that may impact a factor-  
 3 two analysis, stating that “computer programs differ from books, films, and many other ‘literary  
 4 works’ in that [software] programs almost always serve functional purposes.” *Id.* at 1198; *see also*  
 5 *id.* at 1202 (explaining that the declaring computer code at issue was, “if copyrightable at all, further  
 6 than are most computer programs (such as the implementing code) from the core of copyright” and  
 7 “inherently bound together with uncopyrightable ideas”). When considering the circumstances  
 8 surrounding Meta’s use of Plaintiffs’ creative, expressive works of authorship, the instant case is  
 9 easily distinguishable from the software-specific facts of *Google v. Oracle*.

10           Meta also cites to *Google v. Oracle* to argue that Llama is “precisely the kind of ‘highly  
 11 creative and innovative tool’ the Supreme Court found to be ‘consistent with that creative  
 12 “progress” that is the basic constitutional objective of copyright itself.” Dkt. 501 at 17. In comparing  
 13 its development of Llama with the innovation at issue in *Google v. Oracle*, Meta ignores the limited  
 14 application of *Google v. Oracle* and misrepresents the scope of the fair use doctrine. Moreover, if  
 15 creative progress and innovation, standing alone, were the only litmus test for fair use, very few  
 16 uses would not qualify. In reality, the fair use test is a much more nuanced and complex doctrine.

17           **v. *Sony Computer Entertainment, Inc. v. Connectix Corp.* (“Sony”)**  
 18           **and *Sega Enters. Ltd. v. Accolade, Inc.* (“Sega”)**

19           Meta wrongly analogizes its conduct to the facts of *Sony*, in which reverse engineering of  
 20 software code was found to be fair use, contending that Meta “made copies of Plaintiffs’ books to  
 21

 23 [destabilizes-fair-use-andy-warhol-foundation-v-goldsmith-guest-blog-post.htm](https://blog.ericgoldman.org/archives/2023/06/u-s-supreme-court-vindicates-photographer-but-destabilizes-fair-use-andy-warhol-foundation-v-goldsmith-guest-blog-post.htm) (“Despite those  
 24 caveats, the opinion is likely to be enormously consequential, far more so than the Court’s similarly  
 25 narrow and context-specific ruling two years ago in the *Google v. Oracle* software case.”); Tyler  
 26 Ochoa, *U.S. Supreme Court Upholds Fair Use in Google-Oracle Software Battle* (Guest Blog Post)  
 27 (Apr. 8, 2021), [https://blog.ericgoldman.org/archives/2021/04/u-s-supreme-court-upholds-fair-use-](https://blog.ericgoldman.org/archives/2021/04/u-s-supreme-court-upholds-fair-use-in-google-oracle-software-battle-guest-blog-post.htm)  
 28 [in-google-oracle-software-battle-guest-blog-post.htm](https://blog.ericgoldman.org/archives/2021/04/u-s-supreme-court-upholds-fair-use-in-google-oracle-software-battle-guest-blog-post.htm) (“Any Supreme Court opinion is important,  
 and this one no doubt will be quoted often in future briefs and opinions. But other than clarifying the  
 standard of review, I doubt the decision will have much impact on fair use cases that do not involve  
 software.”).

1 train Llama on statistical information about their language and syntax without including any  
 2 protected expression in its code or weights” and “[t]hat information is then used to enable Llama to  
 3 perform functions and create outputs completely unrelated to, and different from, reading Plaintiffs’  
 4 books.” Dkt. 501 at 17.

5 In *Sony*, the Ninth Circuit concluded that Connectix’s intermediate copying for reverse  
 6 engineering qualified as fair use, necessary to permit Connectix to make its non-infringing game  
 7 station function with PlayStation games. 203 F.3d 596 (9th Cir. 2000). Specifically, the court held  
 8 that Sony’s copyrighted software code included functional elements that resulted in a lower degree  
 9 of protection. Similar to the decision in *Google v. Oracle*, the decision in *Sony* largely depended on  
 10 the analysis of factor two and the work at issue being a computer program. The factor-two analysis  
 11 was central to the ultimate fair use finding, and it would be inapplicable to the highly expressive  
 12 works copied by Meta here.

13 The Ninth Circuit in *Sega*, a case involving very similar facts to *Sony*, further confirmed the  
 14 inapplicability of reverse engineering computer code cases when the works at issue are highly  
 15 expressive. The court explained that because “Sega’s video game programs contain unprotected  
 16 aspects that cannot be examined without copying, we afford them a lower degree of protection than  
 17 more traditional literary works.” 977 F.2d 1510, 1526 (9th Cir. 1992). The works that Meta copied  
 18 to train Llama are the exact type of “traditional literary works” that the Ninth Circuit in *Sega* and  
 19 *Sony* confirmed deserve a higher degree of protection and thereby significantly impact any fair use  
 20 analysis.

#### 21 **D. Courts in Other AI Copyright Cases Distinguished Meta’s Authorities** 22 **or Found Them to be Inapplicable to AI Fair Use Analysis**

23 Few courts have yet had occasion to address the issue of whether copying of copyright works  
 24 for AI “training” purposes is fair use, but the courts that have considered the issue have disregarded  
 25 much of the case law cited by Meta.

26 In *Thomson Reuters v. Ross*, the district court rejected the fair use defense for AI training.  
 27 *Thomson Reuters Enter. Ctr. GmbH v. Ross Intelligence Inc.*, --- F. Supp. 3d. ---, No. 1:20-CV-  
 28 613-SB, 2025 WL 458520 (D. Del. Feb. 11, 2025) (“Thomson”). Relying heavily on the Supreme

1 Court’s decision in *Warhol*, the court held that Ross’s use was not transformative because it did not  
 2 have a “further purpose or different character” from Thomson Reuters’ works. *Id.* at \*7. Most  
 3 importantly for purposes of Meta’s summary judgment motion, the court held that many of the cases  
 4 on which Meta relies—specifically *Google v. Oracle*, *Sony*, and *Sega*—“are inapt.” *Id.* at \*8. The  
 5 court gave several reasons to support of its conclusion:

6 First and foremost, those cases are all about copying computer code. This case is  
 7 not... In copyright, ‘computer programs differ from books, films, and many other  
 8 literary works in that such programs almost always serve functional purposes.’  
 9 *Google*, 593 U.S. at 21 (internal quotation marks omitted). So the fair-use  
 10 considerations for these programs do not always apply to cases about copying  
 11 written words.

12 *Id.* The court explained that intermediate-copying cases like *Sega* and *Sony* that have found in favor  
 13 of fair use involve copying of functional computer code (usually through the process of reverse  
 14 engineering) that was *necessary* for a competitor to innovate. *Id.* In contrast, the court found that  
 15 the “training” on literary works involved in that case was not analogous to copying of computer  
 16 code whose underlying ideas can be reached only by copying their expression. *Id.* Specifically, the  
 17 court concluded:

18 [T]hese computer-programming cases about intermediate copying rely on a factor  
 19 absent here: The copying was *necessary* for competitors to innovate. In *Google*,  
 20 Google had copied part of a computer-programming language—specifically, the  
 21 code that lets programmers speak to software in a particular way. *Id.* at 6, 29– 33.  
 22 That copying was “necessary for different programs to speak to each other.” *Id.* at  
 23 31. The copying in *Sony* was also necessary. The Ninth Circuit ‘appl[ied] fair use  
 24 to intermediate copying [that was] necessary to reverse engineer access to  
 25 unprotected functional elements within a program.’ *Id.* at 22. ‘[I]ntermediate  
 26 copying . . . was a fair use for the purpose of gaining access to the unprotected  
 27 elements of Sony’s software.’ *Sony*, 203 F.3d at 602. Likewise, *Sega* addressed  
 28 copying that occurred “solely in order to discover the functional requirements for

1 compatibility.” 977 F.2d at 1522. Here, though, there is no computer code whose  
2 underlying ideas can be reached only by copying their expression. The “copying is  
3 [not] reasonably necessary to achieve the user’s new purpose.” *Warhol*, 598 U.S.  
4 at 532.

5 *Id.* at 18-19. Because the present case involves written works and not computer code, functional  
6 elements, or reverse engineering, similar to the court’s reasoning in the *Ross* case, these  
7 intermediate copying cases are wholly inapplicable.

8 In *Andersen v. Stability AI Ltd.*, a generative AI infringement case pending before the  
9 Northern District of California in which similar fair use questions are being considered, Judge  
10 Orrick issued an order granting in part and denying in part motions to dismiss a first amended  
11 complaint. 744 F.Supp.3d 956 (N.D. Cal. Aug. 12, 2024). In the *Andersen* order, Judge Orrick made  
12 clear that AI technology is different from past technologies such that past copyright infringement  
13 cases involving other technologies may have little relevance to these AI infringement cases. *Id.* at  
14 9. In *Andersen*, the defendants attempted to argue that AI technology is no different than the VCR,  
15 xerography machines, or other technologies previously found to be non-infringing. *Id.* Judge Orrick  
16 debunked that notion, explaining that AI infringement is not at all similar to the copyright  
17 infringement cases involving the sales of VCRs:

18 [T]his is a case where plaintiffs allege that Stable Diffusion is built to a significant  
19 extent on copyrighted works and that the way the product operates necessarily  
20 invokes copies or protected elements of those works. The plausible inferences at  
21 this juncture are that Stable Diffusion *by operation* by end users creates copyright  
22 infringement and was created to facilitate that infringement by design.

23 *Id.* In other words, Judge Orrick distinguished generative AI from past technologies that were found  
24 to be a fair use because generative AI models ingest copies before making the models available to  
25 users. By contrast, with VCRs and similar copying devices, the copies were made by the consumer,  
26 not beforehand by the defendants. Thus, unlike the makers of VCRs and similar “dumb machines,”  
27 Meta relies on infringement of Plaintiffs’ works as the means to make their AI machine, Llama.

28 Judge Orrick went on to explain that because of the unique nature of generative AI, the “run

of the mill” copyright cases relied upon by the defendants (including Meta in the present case) were unhelpful. *Id.* at 17 n.15. He noted that defendants’ reliance on cases where a showing of substantial similarity between works is required when determining whether an inference of copying can be supported was also unavailing “in this case where the copyrighted works themselves are alleged to have not only been used to train the AI models but also invoked in their operation.” *Id.*

### **Conclusion**

The cases relied on by Meta for its fair use arguments are of limited relevance here given the narrowed interpretation of transformativeness post-*Warhol*. This Court should deny Meta’s motion for summary judgment.
